

(a) Golden vector #7: largest predicted-attack score
True: attack; predicted: attack; sum = $+12.042992 \times 10^6$

(b) Golden vector #140: smallest predicted-normal score
True: normal; predicted: normal; sum = -11.561249×10^6

(c) Golden vector #29: closest to the decision threshold
True: attack; predicted: attack; sum = $+0.120232 \times 10^6$

Exact contribution to integer score (×10⁶)

Blue: toward attack; red: toward normal. Numeric labels are transformed coordinates.
